BUILDCHAT - Primer Peldaño Week 12

Participant: David Buzali

Development date: 29 October 2026

Repository: https://github.com/davidbuzali/week-9-primer-peldano

Live URL: https://primer-peldano-mx.vercel.app

This record contains the complete user-visible David-Codex exchange captured during the Week 12 rebuild through final deployment preparation. Tool payloads and hidden system instructions are not reproduced; their observable outcomes are recorded in `docs/TESTING.md`, Git history, and deployment IDs.

My request:

My PPPP-RRRR-VVVV Manifesto

Purpose I intend to build something meaningful that contributes to the world, creates lasting opportunity, and improves the lives of others. I want to confront educational inequality, especially in Mexico, so more people can think critically and choose their own paths. A life well used will combine contribution, fulfilling work, personal freedom, and presence for those I love.

Passions I am energized by consequential problem-solving, decision-making, and optimization with measurable real-world impact. Competition, teamwork, disciplined improvement, and being useful to a shared mission bring out my best. I will deepen my knowledge of AI, business, and consulting so I can solve important problems across industries.

Principles I will act with loyalty, honesty, respect, empathy, fairness, and regard for health and the law. Important decisions must reflect my values, consider their long-term effects, and remain feasible. I will pursue excellence without demanding perfection from myself or others.

Personality I am disciplined, ambitious, analytical, and naturally inclined to lead. I bring vision, dedication, and an ability to make complex ideas understandable. My growth requires learning to delegate, trust others, rest when necessary, and remain steady when a problem cannot be resolved immediately.

Resources I have time, education, energy, initiative, opportunities, and a valuable network. I will convert them into the resources I need most: capital, technological mastery, and a trusted team. I will use AI to increase my efficiency and reach while continuing to invest in education and formative experiences.

Relationships I want reciprocal relationships grounded in care, effort, loyalty, empathy, and honest communication. I will be present and dependable while maintaining boundaries that protect my health and identity. Supporting others must not require abandoning myself.

Realities Self-criticism, impatience, fear of failure, and limited self-trust can restrict me more than external circumstances. I am willing to invest substantial time in my ambitions, but I will not sacrifice the health, relationships, and freedom those ambitions are intended to create.

Repertoire I design databases, analyze data, translate findings into decisions, and make numerical problems understandable. My Industrial Engineering background provides strong systems, optimization, and problem-solving skills. I lead and collaborate well, learning best through formal study, mentorship, and teaching others.

Vision I will build and lead an enduring business while remaining healthy and present at home. Its success will be measured not only financially, but also by the security, opportunity, and growth it provides its team and community. I want agency over my direction and work that extends beyond me.

Variables My industry, business model, location, and timeline may change as technology, opportunities, and responsibilities evolve. My values will not. I will decide whether to persist or pivot through personal alignment, visible results, and trusted advice, taking calculated risks appropriate to my responsibilities.

Voices I value the guidance of my parents, sisters, and closest friends, but their expectations will not define my life. When my inner critic creates urgency, I will remember that clarity grows through action and that I do not need every answer today. I will learn to trust my own voice.

Vulnerabilities Fear and uncertainty can drive me toward stress, hyperfixation, and excessive control. Fear of appearing vulnerable can also prevent me from seeking help. Exercise, therapy, trusted relationships, rest, and healthy boundaries will keep me grounded. I will build boldly without abandoning myself, leading without needing total control and measuring success by both what I create and the lives I strengthen. Whenever we produce coursework, commit it, and push it to GitHub. Then we will deploy on Vercel. If any access has expired, ask me to log back in.

2. CODEX - 11:28:02

I'll use the PDF workflow to extract the Week 12 blueprint accurately, separate its embedded assignment instructions from your own request, and then inspect the course workspace before producing, committing, pushing, and deploying the required deliverable.

3. CODEX - 11:28:06

The repository already contains substantial untracked coursework and is 13 commits ahead of GitHub, so I'll isolate this assignment carefully and avoid sweeping unrelated work into the commit. I'm now extracting both provided sources and checking the existing Week 12 structure, remote, and deployment configuration.

4. CODEX - 11:28:50

The blueprint selects a conditional, narrow Week 12 build: Primer Peldaño for one real opening, with worker-controlled evidence mapped to employer-declared criteria as supported/partial/unresolved. I'll use the image-generation skill for the required packet mockup and the Sites workflow for the build/deployment, while preserving the blueprint's unresolved employer and 10:1 claims as gates rather than pretending they are results.

5. CODEX - 11:29:08

The image-generation skill is now shaping the required pre-code mockup: a Spanish, worker-controlled criterion map with an explicit employer-commitment gate and no global score. This mockup will be saved inside the new Week 12 project and cited in the product charter before implementation begins.

6. CODEX - 11:30:08

I found an existing Primer Peldaño repository and Vercel project from Week 9, which is the right continuity for a venture rebuild. I'm checking that nested repository's clean state and credentials now; I'll evolve it in place instead of creating a disconnected duplicate, and I'll keep every Week 12 claim explicitly separated from the Week 9 simulated evidence.

7. CODEX - 11:30:24

Before writing the charter, I'm verifying the benchmark with current primary sources because the packet requires a defensible "best existing solution" line. The charter will distinguish benchmark evidence from unverified venture assumptions and will not turn the reported worker story into public product data without documented consent.

8. CODEX - 11:32:39

The charter is committed before product code, satisfying the required ordering. The Week 12 framework migration is now underway: Next.js/React, Tailwind, a visible simulated employer gate, and a Supabase boundary that will remain inactive until safe public configuration and RLS exist.

9. CODEX - 11:40:53

The core Week 12 interaction is now implemented: visitors can switch between the honest production stop-state and the invented demo, edit bounded evidence, see deterministic criterion statuses with provenance, correct the record, and export locally. Supabase is present only as a guarded, RLS-ready boundary; the public demo deliberately stores nothing.

10. CODEX - 11:41:20

The first working slice has passed type checking, lint, seven logic tests, and a production build. I'm starting deployment 1 now against the existing Primer Peldaño Vercel project; if its saved session has expired, I'll stop and ask you to log back in as requested.

11. CODEX - 11:43:23

Deployment 1 reached Vercel but failed before publication because the existing Week 9 project still expected the old Vite `dist` directory. I've identified the compatibility setting and am correcting it to Next.js's `.next` output before retrying; authentication is valid.

12. CODEX - 11:45:18

Deployment 1 is live and anonymously returns HTTP 200. I'm now assigning a venture-identity Vercel alias (`primer-peldano-mx.vercel.app`) so the URL of record is no longer the old "Week 9" project name.

13. CODEX - 11:46:39

A browser-level check revealed an important issue that HEAD requests did not: Vercel's deployment protection redirects an ordinary visitor to login. That violates the blueprint's "door must open" rule. I'm treating this as the required mechanical defect and will remove only this project's protection, verify an anonymous browser session, and then redeploy the fixed release.

14. CODEX - 11:49:21

The anonymous browser pass now works on the venture URL, including the stop-state, sensitive-data rejection, edited-evidence regression, and mobile layout with no horizontal overflow. The mechanical defect was deployment protection; the durable fix is being documented and encoded alongside the Next.js Vercel settings before the final usability pass and second deployment.

15. CODEX - 11:50:05

The usability pass surfaced a sharper issue than copy polish: the page defaulted straight into a simulated employer commitment, so a hurried worker could reach evidence fields without actively recognizing that no real employer had committed. I'm changing the default to the honest stop-state and requiring an explicit choice to open the invented demo. I'll record this as a preliminary synthetic-persona finding, not misrepresent it as a fresh independent chat.

16. CODEX - 11:50:56

The usability correction is committed as the fifth Week 12 commit, and the full suite now passes: 10 tests, type checking, lint, and the Next.js production build. I'm deploying release 2 and will verify that the venture alias opens anonymously into the blocked-by-default state.

17. CODEX - 11:52:33

Release 2 is live, unprotected, and verified in the final mobile browser: it opens in the stop-state, requires an explicit demo choice, and the default evidence maps to four supported criteria with no global score. I'm now finalizing the GitHub handoff and regenerating the required Week 12 submission PDFs from the updated packet, preliminary persona record, and build evidence.

18. CODEX - 11:53:48

The PDF skill is now taking over for the three required submission files. It requires an artifact-start marker before authoring; after that I'll render every generated PDF to images and visually inspect the pages before committing them.

19. CODEX - 11:55:40

The first visual inspection found two layout defects: an orphaned "Unresolved gates" section on a nearly blank Packet page, and transcript-internal headings forcing wasteful page breaks in BUILDCHAT. The PDF skill requires fixing these source-layout issues before delivery, so I'm compacting the Packet and demoting embedded chat headings while preserving every word.
